

isi-Studio Butterfly for Shearography

NEW: isi-Studio was **completely redesigned** and is now officially released in 2025 for SE4

Introducing new isi-Studio Butterfly

User Interface

- Modern and user-friendly interface
- Redesigned to make navigation **easier**, more **intuitive**, and more **efficient**
- Built with **dockable views** to support a customizable workspace layout
- Optimal for **multi-monitor setups**, with full **4K resolution support**
- Currently available in **English, German, and Chinese**, with **additional languages** planned for upcoming releases

Hardware can be easily controlled

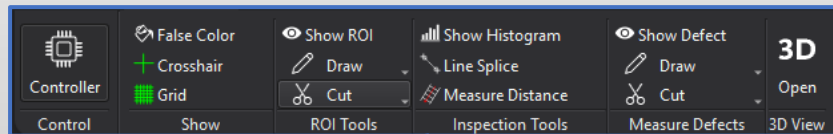

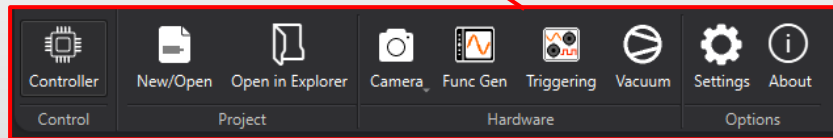

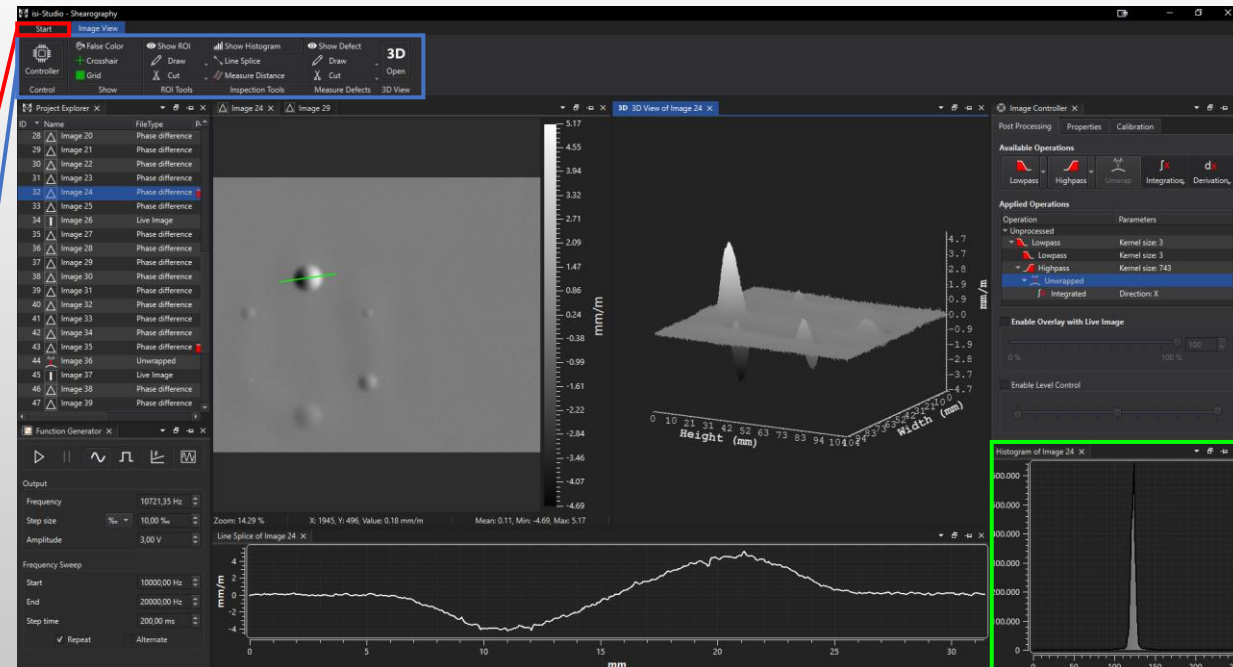

Image view options are more cleanly structured

panels can be rearranged flexibly

Introducing new isi-Studio Butterfly

Powerful Hardware Integration

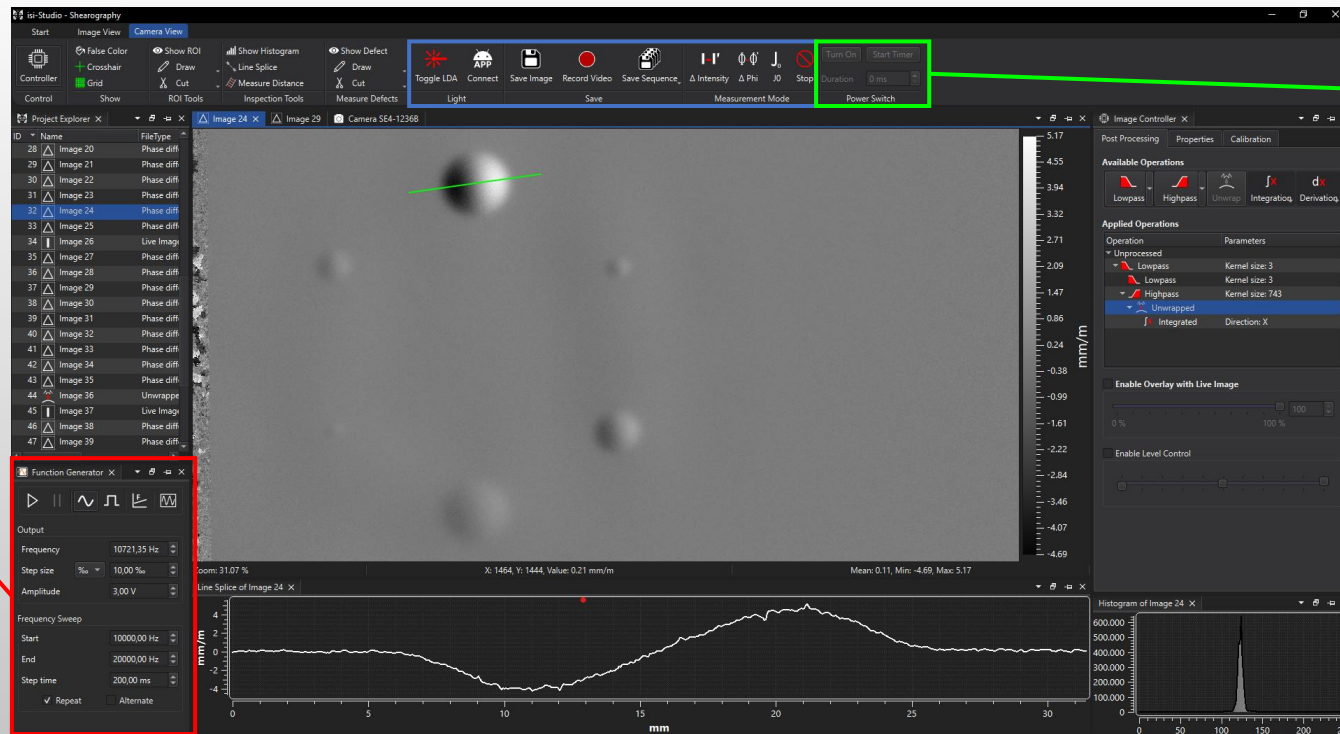

- All connected hardware is **managed and controlled** directly within isi-Studio
- All devices are **fully hot-pluggable** - the system **automatically recovers** without requiring a session restart
- Already prepared for **future hardware releases**, thanks to its **new software architecture**
- Offers **backwards compatibility** with numerous isi-sys hardware devices

Halogen Floodlight
for thermal loading

Function Generator
for dynamic loading
with Piezoshaker

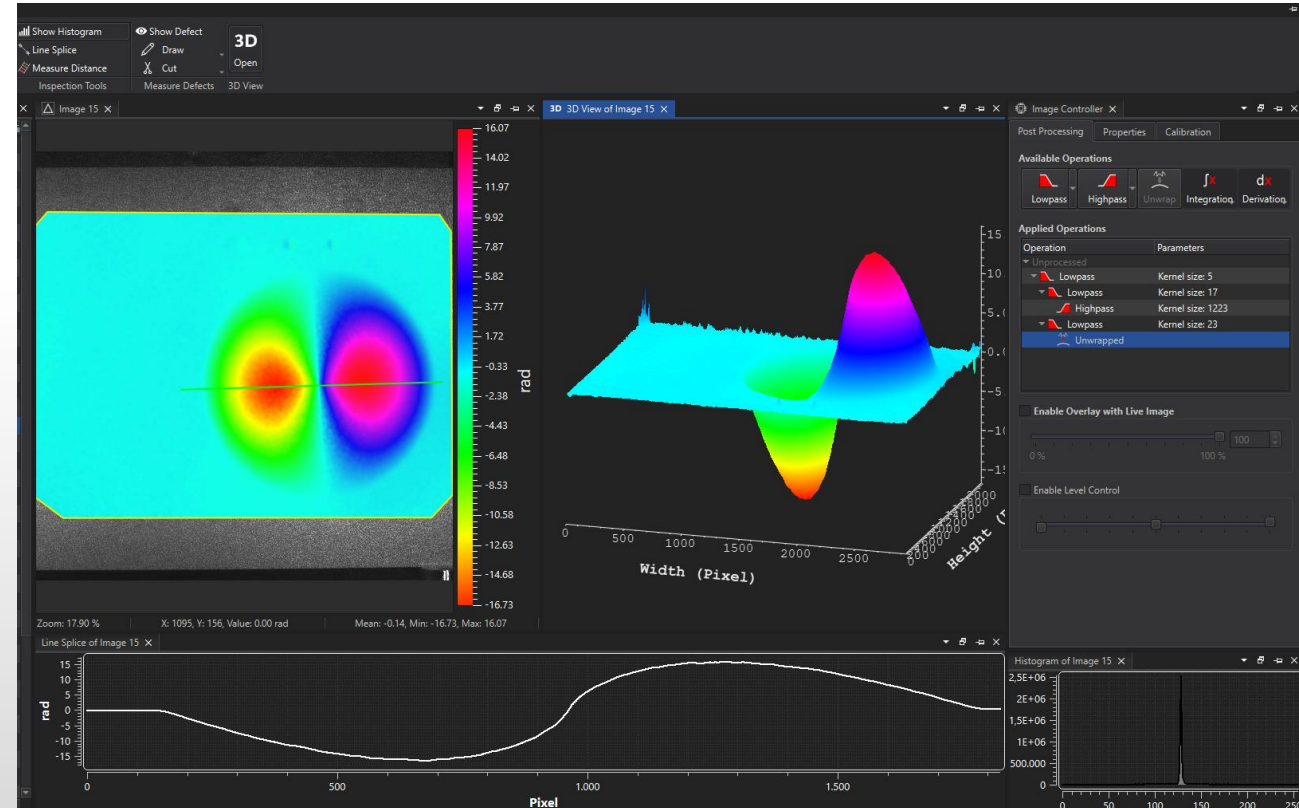

Connected Hardware:

Device Name	Status
Switch Device	
Halogen Switch	Available
Function Generator	
Function Gen	Available
Camera	
SE4-1236B	Available
Trigger I/O Control	
SE-Control	Available
Remote Shearing	
Piezomotor	Available

Introducing new isi-Studio Butterfly

Improved Algorithms

- Faster **real-time phase reconstruction** and **filtering**
- **Predefined measurement routines** enable repeatable results across sessions and users
- **Shear distance** and **image scale** can automatically be determined, reducing manual setup effort
- **Exposure time can be adjusted automatically** to achieve optimal results under varying conditions
- **Highlighting over- and underexposed pixels**, for easier manual exposure setup

Advanced inspection tools

- Offers a set of tools for inspecting both **real-time** and **post-processed images**
- These include **Histogram View**, **Line-Splice View**, and **3D View**, all shown in the image above
- Precisely **determines defect size in millimeters**

Introducing new isi-Studio Butterfly

Compatible with isi-Studio App

- isi-Studio App retains the same features as before, with **improved performance** and a **more organized layout**
- The App enables **precise marking of defect locations** on the object's surface
- It includes **additional features** for SE4 Sensor operation, such as image saving, video recording, masking, or laser control (on/off)
- It also enables adjustment of the exposure time
